

Instructions For Project Reports

CSC 720, Artificial Intelligence II, Spring 2021

Content

Report the work of the term project in a written report. Organize the report in a manner appropriate to the type of the project.

A report on an implementational projects should clearly describe the problem addressed and its motivations, as well as the structure, specifications, and properties of the implementation.

A report surveying or analyzing some body of work should clearly identify the topic, the motivations for investigating this topic, and the substance, limitations, and open problems of the studied works.

Preparation

Typical project reports run about the length of conference papers, that is, 5-10 pages in double column format or equivalently, 10-20 single spaced pages in single-column format.

Reports should read like conference papers or journal articles, with the main text consisting of paragraphs supplemented by figures or tables as appropriate. “Outline form” reports that mainly consist of bulleted or numbered lists are not acceptable.

Submission

Submit both a PDF version of the report and the source file(s) used to prepare the report.
