

# Instructions For Project Presentations

## CSC 720, Artificial Intelligence II, Spring 2021

### **Preparation**

Prepare a short presentation on the work constituting the term project. As with class presentations of assigned papers, the aim is to present the central ideas and essential details briefly and clearly.

Address the presentation to all class members, not just to the instructor. Presentations that presume the audience has read the associated project report fail to meet this purpose.

### **Submission**

If the presentation uses electronic slides, submit both a PDF version of the slides and the source file (Powerpoint, LaTeX, etc.) used to produce the PDF.

If the presentation does not use slides, submit a text outline of the presentation, in both PDF and source form.

### **Presentation**

Each student must deliver his or her project presentation to the whole class, normally during the period set aside for the final examination. With the shortened final exam periods currently specified, some presentations may need to occur during class meetings prior to the final exam period.

The instructor will announce the time allowed for each presentation near the end of the semester. With the increased size of the class and the decreased length of the exam period, it may be that talks will need to be held to 5 minutes in length.
